

Package ‘telegram.bot’

November 10, 2018

Type Package

Title Develop a 'Telegram Bot' with R

Version 2.0.0

Description

Provides a pure interface for the 'Telegram Bot API' <<http://core.telegram.org/bots/api>>. In addition to the pure API implementation, it features a number of tools to make the development of 'Telegram' bots with R easy and straightforward, providing an easy-to-use interface that takes some work off the programmer.

URL <http://github.com/ebeneditos/telegram.bot>

BugReports <http://github.com/ebeneditos/telegram.bot/issues>

Imports R6, httr, jsonlite

Depends R (>= 3.2.3)

Suggests covr, testthat, knitr, rmarkdown

License GPL-3

Encoding UTF-8

LazyData true

RoxygenNote 6.1.0

VignetteBuilder knitr

NeedsCompilation no

<i>add_error_handler</i>	3
--------------------------	---

Update	41
Updater	42
user_id	43

Index	44
--------------	-----------

<i>add_error_handler</i>	<i>add_error_handler</i>
--------------------------	--------------------------

Description

Registers an error handler in the [Dispatcher](#).

Usage

`add_error_handler(callback)`

Arguments

<code>callback</code>	A function that takes (Bot, Update) as arguments.
-----------------------	---

<i>add_handler</i>	<i>add_handler</i>
--------------------	--------------------

Description

Register a handler. A handler must be an instance of a subclass of [Handler](#). All handlers are organized in groups with a numeric value. The default group is 1. All groups will be evaluated for handling an update, but only 0 or 1 handler per group will be used.

Usage

`add_handler(handler, group = 1)`

Arguments

<code>handler</code>	A Handler instance.
<code>group</code>	The group identifier, must be higher or equal to 1. Default is 1.

Details

The priority/order of handlers is determined as follows:

1. Priority of the group (lower group number = higher priority)
2. The first handler in a group which should handle an update will be used. Other handlers from the group will not be used. The order in which handlers were added to the group defines the priority.

answerCallbackQuery *answerCallbackQuery*

Description

Use this method to send answers to callback queries sent from **inline keyboard**. The answer will be displayed to the user as a notification at the top of the chat screen or as an alert. On success, TRUE is returned.

Usage

```
answerCallbackQuery(callback_query_id, text = NULL, show_alert = FALSE,
    url = NULL, cache_time = NULL)
```

Arguments

callback_query_id	Unique identifier for the query to be answered
text	(Optional). Text of the notification. If not specified, nothing will be shown to the user, 0-200 characters
show_alert	(Optional). If TRUE, an alert will be shown by the client instead of a notification at the top of the chat screen. Defaults to FALSE
url	(Optional). URL that will be opened by the user's client
cache_time	(Optional). The maximum amount of time in seconds that the result of the callback query may be cached client-side. Telegram apps will support caching starting in version 3.14. Defaults to 0

Details

You can also use its snake_case equivalent `answer_callback_query`.

answerInlineQuery *answerInlineQuery*

Description

Use this method to send answers to an inline query. No more than 50 results per query are allowed.

Usage

```
answerInlineQuery(inline_query_id, results, cache_time = 300,
    is_personal = NULL, next_offset = NULL, switch_pm_text = NULL,
    switch_pm_parameter = NULL)
```

Arguments

<code>inline_query_id</code>	Unique identifier for the answered query
<code>results</code>	A list of InlineQueryResult for the inline query
<code>cache_time</code>	(Optional). The maximum amount of time in seconds that the result of the inline query may be cached on the server
<code>is_personal</code>	(Optional). Pass TRUE, if results may be cached on the server side only for the user that sent the query. By default, results may be returned to any user who sends the same query
<code>next_offset</code>	(Optional). Pass the offset that a client should send in the next query with the same text to receive more results. Pass an empty string if there are no more results or if you don't support pagination. Offset length can't exceed 64 bytes
<code>switch_pm_text</code>	(Optional). If passed, clients will display a button with specified text that switches the user to a private chat with the bot and sends the bot a start message with the parameter <code>switch_pm_parameter</code>
<code>switch_pm_parameter</code>	(Optional). Deep-linking parameter for the /start message sent to the bot when user presses the switch button. 1-64 characters, only A-Z, a-z, 0-9, _ and - are allowed. <i>Example:</i> An inline bot that sends YouTube videos can ask the user to connect the bot to their YouTube account to adapt search results accordingly. To do this, it displays a 'Connect your YouTube account' button above the results, or even before showing any. The user presses the button, switches to a private chat with the bot and, in doing so, passes a start parameter that instructs the bot to return an auth link. Once done, the bot can offer a switch_inline button so that the user can easily return to the chat where they wanted to use the bot's inline capabilities.

Details

To enable this option, send the `/setinline` command to [@BotFather](#) and provide the placeholder text that the user will see in the input field after typing your bot's name.

You can also use its snake_case equivalent `answer_inline_query`.

Bot	<i>Bot</i>
-----	------------

Description

This object represents a Telegram Bot.

Usage

```
Bot(token, base_url = NULL, base_file_url = NULL,
    request_config = NULL)
```

Arguments

<code>token</code>	Bot's unique authentication.
<code>base_url</code>	(Optional). Telegram Bot API service URL.
<code>base_file_url</code>	(Optional). Telegram Bot API file URL.
<code>request_config</code>	(Optional). Additional configuration settings to be passed to the bot's POST requests. See the <code>config</code> parameter from <code>?http:::POST</code> for further details. The <code>request_config</code> settings are very useful for the advanced users who would like to control the default timeouts and/or control the proxy used for http communication.

Format

An [R6Class](#) object.

Details

To take full advantage of this library take a look at [Updater](#).

You can also use its methods `snake_case` equivalent.

API Methods

[answerCallbackQuery](#) Send answers to callback queries sent from inline keyboard
[answerInlineQuery](#) Send answers to an inline query
[deleteMessage](#) Delete a message
[deleteWebhook](#) Remove webhook integration
[editMessageReplyMarkup](#) Edit the reply markup of a message
[forwardMessage](#) Forward messages of any kind
[getFile](#) Get info about a file and prepare it for downloading
[getMe](#) Test your bot's auth token
[getUpdates](#) Receive incoming updates
[getUserProfilePhotos](#) Get a list of profile pictures for a user
[getWebhookInfo](#) Get current webhook status
[leaveChat](#) Leave a group, supergroup or channel
[sendAnimation](#) Send animation files
[sendAudio](#) Send audio files
[sendChatAction](#) Tell the user that something is happening on the bot's side
[sendDocument](#) Send general files
[sendLocation](#) Send point on the map
[sendMessage](#) Send text messages
[sendPhoto](#) Send image files
[sendSticker](#) Send .webp stickers

[sendVideo](#) Send mp4 videos
[sendVideoNote](#) Send videos messages
[sendVoice](#) Send .ogg files encoded with OPUS
[setWebhook](#) Receive incoming updates via an outgoing webhook

Other Methods

[clean_updates](#) Clean any pending updates
[set_token](#) Change your bot's auth token

Examples

```
## Not run:  
bot <- Bot(token = 'TOKEN')  
  
## End(Not run)
```

bot_token	<i>bot_token</i>
-----------	------------------

Description

Obtain token from system variables (in `Renviron`) set according to the naming convention `R_TELEGRAM_BOT_X` where X is the bot's name.

Usage

```
bot_token(bot_name)
```

Arguments

bot_name	The bot's name
----------	----------------

Examples

```
## Not run:  
bot_token('RBot')  
  
## End(Not run)
```

CallbackQueryHandler	<i>CallbackQueryHandler</i>
----------------------	-----------------------------

Description

[Handler](#) class to handle Telegram callback queries. Optionally based on a regex.

Usage

```
CallbackQueryHandler(callback, pattern = NULL)
```

Arguments

- | | |
|----------|--|
| callback | The callback function for this handler. See Handler for information about this function. |
| pattern | (Optional). Regex pattern to test. |

Format

An [R6Class](#) object.

check_update	<i>check_update</i>
--------------	---------------------

Description

This method is called to determine if an update should be handled by this handler instance. It should always be overridden (see [Handler](#)).

Usage

```
check_update(update)
```

Arguments

- | | |
|--------|--------------------------|
| update | The update to be tested. |
|--------|--------------------------|

clean_updates	<i>clean_updates</i>
---------------	----------------------

Description

Use this method to clean any pending updates on Telegram servers. Requires no parameters.

Usage

```
clean_updates()
```

`CommandHandler`*CommandHandler*

Description

[Handler](#) class to handle Telegram commands.

Usage

```
CommandHandler(command, callback, filters = NULL, pass_args = FALSE)
```

Arguments

<code>command</code>	The command or list of commands this handler should listen for.
<code>callback</code>	The callback function for this handler. See Handler for information about this function.
<code>filters</code>	(Optional). Only allow updates with these filters. See Filters for a full list of all available filters.
<code>pass_args</code>	(Optional). Determines whether the handler should be passed args, received as a vector, split on spaces.

Format

An [R6Class](#) object.

`deleteMessage`*deleteMessage*

Description

Use this method to delete a message. A message can only be deleted if it was sent less than 48 hours ago. Any such recently sent outgoing message may be deleted. Additionally, if the bot is an administrator in a group chat, it can delete any message. If the bot is an administrator in a supergroup, it can delete messages from any other user and service messages about people joining or leaving the group (other types of service messages may only be removed by the group creator). In channels, bots can only remove their own messages.

Usage

```
deleteMessage(chat_id, message_id)
```

Arguments

<code>chat_id</code>	Unique identifier for the target chat or username of the target channel
<code>message_id</code>	Identifier of the message to delete

Details

You can also use it's snake_case equivalent `delete_message`.

<code>deleteWebhook</code>	<i><code>deleteWebhook</code></i>
----------------------------	-----------------------------------

Description

Use this method to remove webhook integration if you decide to switch back to `getUpdates`. Requires no parameters.

Usage

```
deleteWebhook()
```

Details

You can also use it's snake_case equivalent `delete_webhook`.

<code>Dispatcher</code>	<i><code>Dispatcher</code></i>
-------------------------	--------------------------------

Description

This class dispatches all kinds of updates to its registered handlers.

Usage

```
Dispatcher(bot)
```

Arguments

<code>bot</code>	The bot object that should be passed to the handlers.
------------------	---

Format

An [R6Class](#) object.

Methods

[add_handler](#) Registers a handler in the Dispatcher.

[add_error_handler](#) Registers an error handler in the Dispatcher.

```
editMessageReplyMarkup
```

editMessageReplyMarkup

Description

Use this method to edit only the reply markup of messages sent by the bot or via the bot (for inline bots).

Usage

```
editMessageReplyMarkup(chat_id = NULL, message_id = NULL,
    inline_message_id = NULL, reply_markup = NULL)
```

Arguments

chat_id	(Optional). Unique identifier for the target chat or username of the target channel
message_id	(Optional). Required if inline_message_id is not specified. Identifier of the sent message
inline_message_id	(Optional). Required if chat_id and message_id are not specified. Identifier of the inline message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply

Details

You can also use it's snake_case equivalent edit_message_reply_markup.

```
effective_chat
```

effective_chat

Description

The chat that this update was sent in, no matter what kind of update this is. Will be None for inline_query, chosen_inline_result, callback_query from inline messages, shipping_query and pre_checkout_query.

Usage

```
effective_chat()
```

effective_message	<i>effective_message</i>
-------------------	--------------------------

Description

The message included in this update, no matter what kind of update this is. Will be None for inline_query, chosen_inline_result, callback_query from inline messages, shipping_query and pre_checkout_query.

Usage

effective_message()

effective_user	<i>effective_user</i>
----------------	-----------------------

Description

The user that sent this update, no matter what kind of update this is. Will be NULL for channel_post.

Usage

effective_user()

Filters	<i>Filters</i>
---------	----------------

Description

Predefined filters for use as the filter argument of class [MessageHandler](#).

Usage

Filters

Format

A list with filtering functions.

Functions

- all: All Messages.
- text: Text Messages.
- command: Messages starting with /.
- reply: Messages that are a reply to another message.
- audio: Messages that contain audio.
- document: Messages that contain document.
- photo: Messages that contain photo.
- sticker: Messages that contain sticker.
- video: Messages that contain video.
- voice: Messages that contain voice.
- contact: Messages that contain contact.
- location: Messages that contain location.
- venue: Messages that are forwarded.
- game: Messages that contain game.

Examples

```
## Not run:
# Use to filter all video messages
video_handler <- MessageHandler(callback_method, Filters$video)

# To filter all contacts, etc.
contact_handler <- MessageHandler(callback_method, Filters$contact)

## End(Not run)
```

ForceReply

ForceReply

Description

Upon receiving a message with this object, Telegram clients will display a reply interface to the user (act as if the user has selected the bot's message and tapped 'Reply').

Usage

```
ForceReply(force_reply = TRUE, selective = NULL)
```

Arguments

force_reply	Shows reply interface to the user, as if they manually selected the bot's message and tapped 'Reply'. Defaults to TRUE.
selective	(Optional). Use this parameter if you want to show the keyboard to specific users only.

Examples

```
## Not run:
# Initialize bot
bot <- TGBot$new(token = bot_token('RBot'))
bot$set_default_chat_id(user_id('me'))

# Set input parameters
text <- "Don't forget to send me the answer!"

# Send reply message
bot$sendMessage(text, reply_markup = ForceReply())

## End(Not run)
```

forwardMessage

*forwardMessage***Description**

Use this method to forward messages of any kind.

Usage

```
forwardMessage(chat_id, from_chat_id, message_id,
  disable_notification = FALSE)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
from_chat_id	Unique identifier for the chat where the original message was sent
message_id	Message identifier in the chat specified in from_chat_id
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound

Details

You can also use it's snake_case equivalent forward_message.

getFile	<i>getFile</i>
---------	----------------

Description

Use this method to get basic info about a file and prepare it for downloading. For the moment, bots can download files of up to 20MB in size. It is guaranteed that the link will be valid for at least 1 hour. When the link expires, a new one can be requested by calling `get_file` again.

Usage

```
getFile(file_id)
```

Arguments

file_id	The file identifier
---------	---------------------

Details

You can also use it's snake_case equivalent `get_file`.

getMe	<i>getMe</i>
-------	--------------

Description

A simple method for testing your bot's auth token. Requires no parameters.

Usage

```
getMe()
```

Details

You can also use it's snake_case equivalent `get_me`.

getUpdates

*getUpdates***Description**

Use this method to receive incoming updates. It returns a list of [Update](#) objects.

Usage

```
getUpdates(offset = NULL, limit = 100, timeout = 0,
  allowed_updates = NULL)
```

Arguments

offset	(Optional). Identifier of the first update to be returned returned.
limit	(Optional). Limits the number of updates to be retrieved. Values between 1-100 are accepted. Defaults to 100.
timeout	(Optional). Timeout in seconds for long polling. Defaults to 0, i.e. usual short polling. Should be positive, short polling should be used for testing purposes only.
allowed_updates	<p>(Optional). String or vector of strings with the types of updates you want your bot to receive. For example, specify <code>c("message", "edited_channel_post", "callback_query")</code> to only receive updates of these types. See Update for a complete list of available update types. Specify an empty string to receive all updates regardless of type (default). If not specified, the previous setting will be used.</p> <p>Please note that this parameter doesn't affect updates created before the call to the <code>getUpdates</code>, so unwanted updates may be received for a short period of time.</p>

Details

1. This method will not work if an outgoing webhook is set up.
 2. In order to avoid getting duplicate updates, recalculate offset after each server response or use Bot method [clean_updates](#).
 3. To take full advantage of this library take a look at [Updater](#).
- You can also use it's snake_case equivalent `get_updates`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))

updates <- bot$getUpdates()

## End(Not run)
```

getUserProfilePhotos	<i>getUserProfilePhotos</i>
----------------------	-----------------------------

Description

Use this method to get a list of profile pictures for a user.

Usage

```
getUserProfilePhotos(user_id, offset = NULL, limit = 100)
```

Arguments

user_id	Unique identifier of the target user
offset	(Optional). Sequential number of the first photo to be returned. By default, all photos are returned
limit	(Optional). Limits the number of photos to be retrieved. Values between 1-100 are accepted. Defaults to 100.

Details

You can also use it's snake_case equivalent `get_user_profile_photos`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')

bot$getUserProfilePhotos(chat_id = chat_id)

## End(Not run)
```

getWebhookInfo	<i>getWebhookInfo</i>
----------------	-----------------------

Description

Use this method to get current webhook status. Requires no parameters.

Usage

```
getWebhookInfo()
```

Details

If the bot is using `getUpdates`, will return an object with the url field empty.

You can also use it's snake_case equivalent `get_webhook_info`.

 Handler

Handler

Description

The base class for all update handlers. Create custom handlers by inheriting from it.

Usage

```
Handler(callback, check_update = NULL, handle_update = NULL,
        handlername = NULL)
```

Arguments

<code>callback</code>	The callback function for this handler. Its inputs will be (bot, update), where bot is a Bot instance and update an Update class.
<code>check_update</code>	Function that will override the default check_update method. Use it if you want to create your own Handler.
<code>handle_update</code>	Function that will override the default handle_update method. Use it if you want to create your own Handler.
<code>handlername</code>	Name of the customized class, which will inherit from Handler. If NULL (default) it will create a Handler class.

Format

An [R6Class](#) object.

Methods

[check_update](#) Called to determine if an update should be handled by this handler instance.

[handle_update](#) Called if it was determined that an update should indeed be handled by this instance.

Sub-classes

[MessageHandler](#) To handle Telegram messages.

[CommandHandler](#) To handle Telegram commands.

[CallbackQueryHandler](#) To handle Telegram callback queries.

Examples

```
## Not run:
# Example of a Handler
callback_method <- function(bot, update){
  chat_id <- update$effective_chat()$id
  bot$sendMessage(chat_id = chat_id, text = 'Hello')
}
```

```
hello_handler <- Handler(callback_method)

# Customizing Handler
check_update <- function(update){
  TRUE
}

handle_update <- function(update, dispatcher){
  self$callback(dispatcher$bot, update)
}

foo_handler <- Handler(callback_method,
                       check_update = check_update,
                       handle_update = handle_update,
                       handlername = 'FooHandler')

## End(Not run)
```

handle_update

handle_update

Description

This method is called if it was determined that an update should indeed be handled by this instance. It should also be overridden (see [Handler](#)).

Usage

```
handle_update(update, dispatcher)
```

Arguments

update	The update to be handled.
dispatcher	The dispatcher to collect optional arguments.

Details

In most cases `self$callback(dispatcher$bot, update)` can be called, possibly along with optional arguments.

InlineKeyboardButton *InlineKeyboardButton*

Description

This object represents one button of an inline keyboard. You **must** use exactly one of the optional fields. If all optional fields are NULL, by defect it will generate callback_data with same data as in text.

Usage

```
InlineKeyboardButton(text, url = NULL, callback_data = NULL,
    switch_inline_query = NULL, switch_inline_query_current_chat = NULL)
```

Arguments

text	Label text on the button (Required).
url	(Optional). HTTP url to be opened when button is pressed
callback_data	(Optional). Data to be sent in a callback query to the bot when button is pressed, 1-64 bytes
switch_inline_query	(Optional). If set, pressing the button will prompt the user to select one of their chats, open that chat and insert the bot's username and the specified inline query in the input field. Can be empty, in which case just the bot's username will be inserted.
switch_inline_query_current_chat	(Optional). If set, pressing the button will insert the bot's username and the specified inline query in the current chat's input field. Can be empty, in which case only the bot's username will be inserted.

Details

Note: After the user presses a callback button, Telegram clients will display a progress bar until you call [answerCallbackQuery](#). It is, therefore, necessary to react by calling [answerCallbackQuery](#) even if no notification to the user is needed (e.g., without specifying any of the optional parameters).

InlineKeyboardMarkup *InlineKeyboardMarkup*

Description

This object represents an **inline keyboard** that appears right next to the message it belongs to.

Usage

```
InlineKeyboardMarkup(inline_keyboard)
```

Arguments

`inline_keyboard`

List of button rows, each represented by a list of [InlineKeyboardButton](#) objects

Details

Note: After the user presses a callback button, Telegram clients will display a progress bar until you call [answerCallbackQuery](#). It is, therefore, necessary to react by calling [answerCallbackQuery](#) even if no notification to the user is needed (e.g., without specifying any of the optional parameters).

Examples

```
## Not run:
# Initialize bot
bot <- TGBot$new(token = bot_token('RBot'))
bot$set_default_chat_id(user_id('me'))

# Create Inline Keyboard
text <- "Could you type their phone number, please?"
IKM <- InlineKeyboardMarkup(
  inline_keyboard = list(
    list(InlineKeyboardButton(1),
          InlineKeyboardButton(2),
          InlineKeyboardButton(3)),
    list(InlineKeyboardButton(4),
          InlineKeyboardButton(5),
          InlineKeyboardButton(6)),
    list(InlineKeyboardButton(7),
          InlineKeyboardButton(8),
          InlineKeyboardButton(9)),
    list(InlineKeyboardButton("*"),
          InlineKeyboardButton(0),
          InlineKeyboardButton("#"))
  )
)

# Send Inline Keyboard
bot$sendMessage(text, reply_markup = IKM)

## End(Not run)
```

InlineQueryResult	<i>InlineQueryResult</i>
-------------------	--------------------------

Description

Baseclass for the InlineQueryResult* classes.

Usage

```
InlineQueryResult(type, id, ...)
```

Arguments

type	Type of the result. See the documentation for a list of supported types
id	Unique identifier for this result, 1-64 Bytes
...	Additional parameters for the selected type. See the documentation for the description of the parameters depending on the InlineQueryResult type

Examples

```
## Not run:
document_url <- "https://github.com/ebeneditos/telegram.bot/raw/gh-pages/docs/telegram.bot.pdf"

result <- InlineQueryResult(
  type = "document",
  id = 1,
  title = "Documentation",
  document_url = document_url,
  mime_type = "application/pdf")

## End(Not run)
```

KeyboardButton	<i>KeyboardButton</i>
----------------	-----------------------

Description

This object represents one button of the reply keyboard. Optional fields are mutually exclusive.

Usage

```
KeyboardButton(text, request_contact = NULL, request_location = NULL)
```

Arguments

text	Text of the button. If none of the optional fields are used, it will be sent as a message when the button is pressed
request_contact	(Optional). If TRUE, the user's phone number will be sent as a contact when the button is pressed. Available in private chats only
request_location	(Optional). If TRUE, the user's current location will be sent when the button is pressed. Available in private chats only

Details

Note: request_contact and request_location options will only work in Telegram versions released after 9 April, 2016. Older clients will ignore them.

leaveChat	<i>leaveChat</i>
-----------	------------------

Description

Use this method for your bot to leave a group, supergroup or channel.

Usage

```
leaveChat(chat_id)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
---------	---

Details

You can also use it's snake_case equivalent leave_chat.

MessageHandler	<i>MessageHandler</i>
----------------	-----------------------

Description

[Handler](#) class to handle Telegram messages. They might contain text, media or status updates.

Usage

```
MessageHandler(callback, filters = NULL)
```

Arguments

callback	The callback function for this handler. See Handler for information about this function.
filters	(Optional). Only allow updates with these filters. Use NULL (default) or <code>Filters\$all</code> for no filtering. See Filters for a full list of all available filters.

Format

An [R6Class](#) object.

Examples

```
## Not run:
callback_method <- function(bot, update){
  chat_id <- update$message$chat_id
  bot$sendMessage(chat_id = chat_id, text = 'Hello')
}

# No filtering
message_handler <- MessageHandler(callback_method, Filters$all)

## End(Not run)
```

ReplyKeyboardMarkup *ReplyKeyboardMarkup*

Description

This object represents a **custom keyboard** with reply options.

Usage

```
ReplyKeyboardMarkup(keyboard, resize_keyboard = NULL,
  one_time_keyboard = NULL, selective = NULL)
```

Arguments

keyboard	List of button rows, each represented by a list of KeyboardButton objects
resize_keyboard	(Optional). Requests clients to resize the keyboard vertically for optimal fit. Defaults to FALSE, in which case the custom keyboard is always of the same height as the app's standard keyboard.
one_time_keyboard	(Optional). Requests clients to hide the keyboard as soon as it's been used. The keyboard will still be available, but clients will automatically display the usual letter-keyboard in the chat - the user can press a special button in the input field to see the custom keyboard again. Defaults to FALSE
selective	(Optional). Use this parameter if you want to show the keyboard to specific users only.

Examples

```
## Not run:
# Initialize bot
bot <- TGBot$new(token = bot_token('RBot'))
bot$set_default_chat_id(user_id('me'))

# Create Custom Keyboard
text <- "Aren't those custom keyboards cool?"
RKM <- ReplyKeyboardMarkup(
  keyboard = list(
    list(KeyboardButton("Yes, they certainly are!")),
    list(KeyboardButton("I'm not quite sure")),
    list(KeyboardButton('No...'))),
  resize_keyboard = FALSE,
  one_time_keyboard = TRUE
)

# Send Custom Keyboard
bot$sendMessage(text, reply_markup = RKM)

## End(Not run)
```

ReplyKeyboardRemove *ReplyKeyboardRemove*

Description

Upon receiving a message with this object, Telegram clients will remove the current custom keyboard and display the default letter-keyboard. By default, custom keyboards are displayed until a new keyboard is sent by a bot. An exception is made for one-time keyboards that are hidden immediately after the user presses a button (see [ReplyKeyboardMarkup](#)).

Usage

```
ReplyKeyboardRemove(remove_keyboard = TRUE, selective = NULL)
```

Arguments

remove_keyboard	Requests clients to remove the custom keyboard. (user will not be able to summon this keyboard; if you want to hide the keyboard from sight but keep it accessible, use one_time_keyboard in ReplyKeyboardMarkup). Defaults to TRUE.
selective	(Optional). Use this parameter if you want to show the keyboard to specific users only.

Examples

```
## Not run:
# Initialize bot
bot <- TGBot$new(token = bot_token('RBot'))
bot$set_default_chat_id(user_id('me'))

# Create Custom Keyboard
text <- "Don't forget to send me the answer!"
RKM <- ReplyKeyboardMarkup(
  keyboard = list(
    list(KeyboardButton("Yes, they certainly are!")),
    list(KeyboardButton("I'm not quite sure")),
    list(KeyboardButton('No...'))),
  resize_keyboard = FALSE,
  one_time_keyboard = FALSE
)

# Send Custom Keyboard
bot$sendMessage(text, reply_markup = RKM)

# Remove Keyboard
bot$sendMessage("Okay, thanks!", reply_markup = ReplyKeyboardRemove())

## End(Not run)
```

sendAnimation

sendAnimation

Description

Use this method to send animation files (GIF or H.264/MPEG-4 AVC video without sound).

Usage

```
sendAnimation(chat_id, animation, duration = NULL, width = NULL,
  height = NULL, caption = NULL, parse_mode = NULL,
  disable_notification = FALSE, reply_to_message_id = NULL,
  reply_markup = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
animation	Animation to send. Pass a file_id as String to send an animation that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get an animation from the Internet, or upload a local file by passing a file path
duration	(Optional). Duration of sent audio in seconds
width	(Optional). Video width
height	(Optional). Video height

caption (Optional). Animation caption, 0-1024 characters

parse_mode (Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message

disable_notification (Optional). Sends the message silently. Users will receive a notification with no sound

reply_to_message_id (Optional). If the message is a reply, ID of the original message

reply_markup (Optional). A Reply Markup parameter object, it can be either:

- [ReplyKeyboardMarkup](#)
- [InlineKeyboardMarkup](#)
- [ReplyKeyboardRemove](#)
- [ForceReply](#)

Details

You can also use it's snake_case equivalent `send_animation`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
animation_url <- "http://techslides.com/demos/sample-videos/small.mp4"

bot$sendAnimation(chat_id = chat_id,
                  animation = animation_url)

## End(Not run)
```

sendAudio

sendAudio

Description

Use this method to send audio files, if you want Telegram clients to display them in the music player. Your audio must be in the .mp3 format. On success, the sent Message is returned. Bots can currently send audio files of up to 50 MB in size, this limit may be changed in the future. For sending voice messages, use the [sendVoice](#) method instead.

Usage

```
sendAudio(chat_id, audio, duration = NULL, performer = NULL,
          title = NULL, caption = NULL, disable_notification = FALSE,
          reply_to_message_id = NULL, reply_markup = NULL, parse_mode = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
audio	Audio file to send. Pass a file_id as String to send an audio that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get an audio from the Internet, or upload a local audio file by passing a file path
duration	(Optional). Duration of sent audio in seconds
performer	(Optional). Performer
title	(Optional). Track name
caption	(Optional). Audio caption, 0-1024 characters
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply
parse_mode	(Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message

Details

You can also use it's snake_case equivalent send_audio.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
audio_url <- "http://www.largesound.com/ashborytour/sound/brobob.mp3"

bot$sendAudio(chat_id = chat_id,
              audio = audio_url)

## End(Not run)
```

sendChatAction	<i>sendChatAction</i>
----------------	-----------------------

Description

Use this method when you need to tell the user that something is happening on the bot's side. The status is set for 5 seconds or less (when a message arrives from your bot, Telegram clients clear its typing status).

Usage

```
sendChatAction(chat_id, action)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
action	Type of action to broadcast. Choose one, depending on what the user is about to receive: <ul style="list-style-type: none">• typing for text messages• upload_photo for photos• upload_video for videos• record_video for video recording• upload_audio for audio files• record_audio for audio file recording• upload_document for general files• find_location for location data• upload_video_note for video notes• record_video_note for video note recording

Details

You can also use its snake_case equivalent `send_chat_action`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')

bot$sendChatAction(chat_id = chat_id,
  action = 'typing')

## End(Not run)
```

sendDocument	<i>sendDocument</i>
--------------	---------------------

Description

Use this method to send general files.

Usage

```
sendDocument(chat_id, document, filename = NULL, caption = NULL,
  disable_notification = FALSE, reply_to_message_id = NULL,
  reply_markup = NULL, parse_mode = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
document	File to send. Pass a file_id as String to send a file that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get a file from the Internet, or upload a local file by passing a file path
filename	(Optional). File name that shows in telegram message
caption	(Optional). Document caption, 0-1024 characters
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply
parse_mode	(Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message

Details

You can also use it's snake_case equivalent `send_document`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
document_url <- "https://github.com/ebeneditos/telegram.bot/raw/gh-pages/docs/telegram.bot.pdf"
```

```

bot$sendDocument(chat_id = chat_id,
                  document = document_url)

## End(Not run)

```

sendLocation	<i>sendLocation</i>
--------------	---------------------

Description

Use this method to send point on the map.

Usage

```

sendLocation(chat_id, latitude, longitude, disable_notification = FALSE,
              reply_to_message_id = NULL, reply_markup = NULL)

```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
latitude	Latitude of location
longitude	Longitude of location
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply

Details

You can also use it's snake_case equivalent `send_location`.

Examples

```

## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')

bot$sendLocation(chat_id = chat_id,
                  latitude = 51.521727,
                  longitude = -0.117255)

## End(Not run)

```

sendMessage

sendMessage

Description

Use this method to send text messages.

Usage

```
sendMessage(chat_id, text, parse_mode = NULL,
  disable_web_page_preview = NULL, disable_notification = FALSE,
  reply_to_message_id = NULL, reply_markup = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
text	Text of the message to be sent
parse_mode	(Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message
disable_web_page_preview	(Optional). Disables link previews for links in this message
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply

Details

You can also use it's snake_case equivalent `send_message`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')

bot$sendMessage(chat_id = chat_id,
  text = "*foo bold text*",
  parse_mode = "Markdown")

## End(Not run)
```

sendPhoto

sendPhoto

Description

Use this method to send photos.

Usage

```
sendPhoto(chat_id, photo, caption = NULL, disable_notification = FALSE,
  reply_to_message_id = NULL, reply_markup = NULL, parse_mode = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
photo	Photo to send. Pass a file_id as String to send a photo that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get a photo from the Internet, or upload a local photo by passing a file path
caption	(Optional). Photo caption (may also be used when re-sending photos by file_id), 0-1024 characters
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> ReplyKeyboardMarkup InlineKeyboardMarkup ReplyKeyboardRemove ForceReply
parse_mode	(Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message

Details

You can also use it's snake_case equivalent send_photo.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
photo_url <- "https://telegram.org/img/t_logo.png"

bot$sendPhoto(chat_id = chat_id,
  photo = photo_url,
```

```
caption = "Telegram Logo")

## End(Not run)
```

sendSticker

sendSticker

Description

Use this method to send .webp stickers.

Usage

```
sendSticker(chat_id, sticker, disable_notification = FALSE,
  reply_to_message_id = NULL, reply_markup = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
sticker	Sticker to send. Pass a file_id as String to send a file that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get a .webp file from the Internet, or upload a local one by passing a file path
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply

Details

You can also use it's snake_case equivalent send_sticker.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
sticker_url <- "https://www.gstatic.com/webp/gallery/1.webp"

bot$sendSticker(chat_id = chat_id,
  sticker = sticker_url)

## End(Not run)
```

sendVideo

sendVideo

Description

Use this method to send video files, Telegram clients support mp4 videos (other formats may be sent as Document).

Usage

```
sendVideo(chat_id, video, duration = NULL, caption = NULL,
  disable_notification = FALSE, reply_to_message_id = NULL,
  reply_markup = NULL, width = NULL, height = NULL,
  parse_mode = NULL, supports_streaming = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
video	Video file to send. Pass a file_id as String to send a video that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get a video from the Internet, or upload a local video file by passing a file path
duration	(Optional). Duration of sent audio in seconds
caption	(Optional). Video caption, 0-1024 characters
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply
width	(Optional). Video width
height	(Optional). Video height
parse_mode	(Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message
supports_streaming	(Optional). Pass TRUE, if the uploaded video is suitable for streaming

Details

You can also use it's snake_case equivalent `send_video`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
video_url <- "http://techslides.com/demos/sample-videos/small.mp4"

bot$sendVideo(chat_id = chat_id,
              video = video_url)

## End(Not run)
```

sendVideoNote

sendVideoNote

Description

Use this method to send video messages.

Usage

```
sendVideoNote(chat_id, video_note, duration = NULL, length = NULL,
              disable_notification = FALSE, reply_to_message_id = NULL,
              reply_markup = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
video_note	Video note file to send. Pass a file_id as String to send a video note that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get a video note from the Internet, or upload a local video note file by passing a file path
duration	(Optional). Duration of sent audio in seconds
length	(Optional). Video width and height
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> • ReplyKeyboardMarkup • InlineKeyboardMarkup • ReplyKeyboardRemove • ForceReply

Details

You can also use it's snake_case equivalent `send_video_note`.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
video_note_url <- "http://techslides.com/demos/sample-videos/small.mp4"

bot$sendVideoNote(chat_id = chat_id,
                  video_note = video_note_url)

## End(Not run)
```

sendVoice

sendVoice

Description

Use this method to send audio files, if you want Telegram clients to display the file as a playable voice message. For this to work, your audio must be in an .ogg file encoded with OPUS (other formats may be sent with [sendAudio](#) or [sendDocument](#)).

Usage

```
sendVoice(chat_id, voice, duration = NULL, caption = NULL,
          disable_notification = FALSE, reply_to_message_id = NULL,
          reply_markup = NULL, parse_mode = NULL)
```

Arguments

chat_id	Unique identifier for the target chat or username of the target channel
voice	Voice file to send. Pass a file_id as String to send a voice file that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get a voice file from the Internet, or upload a local voice file file by passing a file path
duration	(Optional). Duration of sent audio in seconds
caption	(Optional). Voice message caption, 0-1024 characters
disable_notification	(Optional). Sends the message silently. Users will receive a notification with no sound
reply_to_message_id	(Optional). If the message is a reply, ID of the original message
reply_markup	(Optional). A Reply Markup parameter object, it can be either: <ul style="list-style-type: none"> ReplyKeyboardMarkup

- [InlineKeyboardMarkup](#)
 - [ReplyKeyboardRemove](#)
 - [ForceReply](#)
- parse_mode (Optional). Send 'Markdown' or 'HTML', if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message

Details

You can also use it's snake_case equivalent send_voice.

Examples

```
## Not run:
bot <- Bot(token = bot_token('RBot'))
chat_id <- user_id('me')
voice_url <- "https://upload.wikimedia.org/wikipedia/commons/c/c8/Example.ogg"

bot$sendVoice(chat_id = chat_id,
              voice = voice_url)

## End(Not run)
```

setWebhook

setWebhook

Description

Use this method to specify a url and receive incoming updates via an outgoing webhook. Whenever there is an update for the bot, we will send an HTTPS POST request to the specified url, containing a JSON-serialized **Update**.

Usage

```
setWebhook(url = NULL, certificate = NULL, max_connections = 40,
           allowed_updates = NULL)
```

Arguments

- url HTTPS url to send updates to. Use an empty string to remove webhook integration.
- certificate (Optional). Upload your public key certificate so that the root certificate in use can be checked. See Telegram's [self-signed guide](#) for details.
- max_connections (Optional). Maximum allowed number of simultaneous HTTPS connections to the webhook for update delivery, 1-100. Defaults to 40. Use lower values to limit the load on your bot's server, and higher values to increase your bot's throughput.

allowed_updates

(Optional). String or vector of strings with the types of updates you want your bot to receive. For example, specify `c("message", "edited_channel_post", "callback_query")` to only receive updates of these types. See [Update](#) for a complete list of available update types. Specify an empty string to receive all updates regardless of type (default). If not specified, the previous setting will be used.

Please note that this parameter doesn't affect updates created before the call to the `get_updates`, so unwanted updates may be received for a short period of time.

Details

If you'd like to make sure that the Webhook request comes from Telegram, we recommend using a secret path in the URL, e.g. `https://www.example.com/<token>`.

You can also use its snake_case equivalent `set_webhook`.

set_token

set_token

Description

Use this method to change your bot's auth token.

Usage

```
set_token(token)
```

Arguments

token	Bot's unique authentication.
-------	------------------------------

start_polling

start_polling

Description

Starts polling updates from Telegram. You can stop the polling either by using the `interrupt` R command in the session menu or with the [stop_polling](#) method.

Usage

```
start_polling(timeout = 10, clean = FALSE, allowed_updates = NULL,
  verbose = FALSE)
```

Arguments

timeout (Optional). Passed to [getUpdates](#). Default is 10.
 clean (Optional). Whether to clean any pending updates on Telegram servers before actually starting to poll. Default is FALSE.
 allowed_updates (Optional). Passed to [getUpdates](#).
 verbose (Optional). If TRUE, prints status of the polling. Default is FALSE.

Examples

```
## Not run:
# Start polling example
updater <- Updater(token = 'TOKEN')

updater$start_polling(verbose = TRUE)

## End(Not run)
```

stop_polling	<i>stop_polling</i>
--------------	---------------------

Description

Stops the polling. Requires no parameters.

Usage

```
stop_polling()
```

Examples

```
## Not run:
# Supperassign the updater
updater <- Updater(token = 'TOKEN')

# Example of a 'kill' command
kill <- function(bot, update){
  bot$sendMessage(chat_id = update$message$chat_id,
    text = "Bye!")
  # Clean 'kill' update
  bot$getUpdates(offset = update$update_id + 1)
  # Stop the updater polling
  updater$stop_polling()
}

updater$dispatcher$add_handler(CommandHandler('kill', kill))

updater$start_polling(verbose = T) # Send '/kill' to the bot

## End(Not run)
```

telegram.bot	<i>telegram.bot</i>
--------------	---------------------

Description

Provides a pure interface for the **Telegram Bot API**. In addition to the pure API implementation, it features a number of tools to make the development of Telegram bots with R easy and straightforward, providing an easy-to-use interface that takes some work off the programmer.

Details

In [this page](#) you can learn how to build a Bot quickly with this package.

Main Classes

Updater Package main class. This class, which employs the class **Dispatcher**, provides a front-end to class **Bot** to the programmer, so they can focus on coding the bot. Its purpose is to receive the updates from Telegram and to deliver them to said dispatcher.

Dispatcher This class dispatches all kinds of updates to its registered handlers.

Handler The base class for all update handlers.

Bot This object represents a Telegram Bot.

Update	<i>Update</i>
--------	---------------

Description

This object represents an incoming **Update**.

Usage

```
Update(data)
```

Arguments

data	Data of the update.
------	---------------------

Format

An **R6Class** object.

Methods

effective_user To get the user that sent this update, no matter what kind of update this is.

effective_chat To get the chat that this update was sent in, no matter what kind of update this is.

effective_message To get the message included in this update, no matter what kind of update this is.

Updater

Updater

Description

Package main class. This class, which employs the class [Dispatcher](#), provides a front-end to class [Bot](#) to the programmer, so they can focus on coding the bot. Its purpose is to receive the updates from Telegram and to deliver them to said dispatcher. The dispatcher supports [Handler](#) classes for different kinds of data: Updates from Telegram, basic text commands and even arbitrary types.

Usage

```
Updater(token = NULL, base_url = NULL, base_file_url = NULL,
        request_config = NULL, bot = NULL)
```

Arguments

token	(Optional). The bot's token given by the @BotFather.
base_url	(Optional). Telegram Bot API service URL.
base_file_url	(Optional). Telegram Bot API file URL.
request_config	(Optional). Additional configuration settings to be passed to the bot's POST requests. See the config parameter from <code>?http:::POST</code> for further details. The request_config settings are very useful for the advanced users who would like to control the default timeouts and/or control the proxy used for http communication.
bot	(Optional). A pre-initialized Bot instance.

Format

An [R6Class](#) object.

Details

Note: You **must** supply either a bot or a token argument.

Methods

[start_polling](#) Starts polling updates from Telegram.
[stop_polling](#) Stops the polling.

References

[Bots: An introduction for developers](#) and [Telegram Bot API](#)

Examples

```
## Not run:
updater <- Updater(token = 'TOKEN')

## End(Not run)
```

user_id	<i>user_id</i>
---------	----------------

Description

Obtain Telegram user id from system variables (in Renviron) set according to the naming convention R_TELEGRAM_USER_X where X is the user's name.

Usage

```
user_id(user_name)
```

Arguments

user_name	The user's name
-----------	-----------------

Examples

```
## Not run:
user_id('me')

## End(Not run)
```
